Design Review: Q3 Launch Plan

Draft 3 | Circulated for comments

Summary

The team proposes to open the public beta during the second week of September, which keeps the launch window clear of the quarterly earnings call. Marketing will prepare a short announcement, and support will publish updated help articles one day before the release.

The largest open risk is customer onboarding for teams that migrate from the desktop product. We estimate that importing existing libraries will take ~~three weeks~~ of engineering time, including automated checks that every document opens and renders exactly as before.

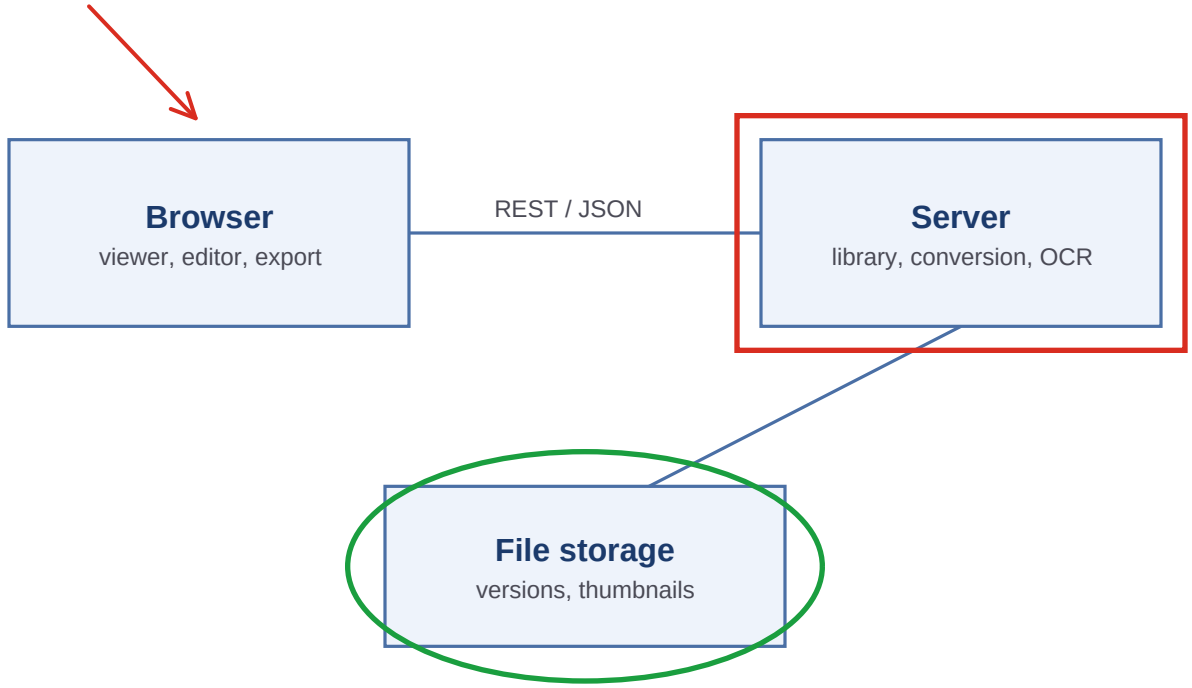
Open questions

Reviewers should confirm whether administrators will recieve a weekly usage report and whether single sign-on must be available on day one. Pricing for education customers is still under discussion and will be finalized after the pilot program ends in August.

Please add your comments directly to this document. Use highlights for passages that need attention and sticky notes for general questions, and reply to existing notes instead of starting new threads.

Architecture Sketch

The diagram below shows the main components. The browser renders and edits documents locally; the server stores the library and runs conversions. Reviewers marked up this page with shapes and ink.



Open question: should thumbnails be generated by the browser instead of the server? The current design keeps the server stateless apart from file storage.

Draft - not for distribution.
Reviewed by Sam, pending sign-off.
