Chapter 1

Getting Started

Reference code R-0001

Long documents are a good test for memory usage, lazy loading and cancellation of stale work. Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance. Long documents are a good test for memory usage, lazy loading and cancellation of stale work.

2

Reference code R-0002

Bookmarks for each chapter point to the first page of that chapter. Thumbnails in the page panel should match the number printed in the center of the page. Zooming in and out should keep the current page in view without visible jumps.

3

Reference code R-0003

Rendering must remain responsive while the user jumps between distant pages of the document. The search index is built progressively and should find the reference code printed on every page. Zooming in and out should keep the current page in view without visible jumps.

4

Reference code R-0004

Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance. Selecting text on this page should produce the same characters that are printed here. Bookmarks for each chapter point to the first page of that chapter.

5

Reference code R-0005

Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance. Bookmarks for each chapter point to the first page of that chapter. The search index is built progressively and should find the reference code printed on every page.

6

Reference code R-0006

Rendering must remain responsive while the user jumps between distant pages of the document. Rendering must remain responsive while the user jumps between distant pages of the document. Zooming in and out should keep the current page in view without visible jumps.

7

Reference code R-0007

Long documents are a good test for memory usage, lazy loading and cancellation of stale work. Thumbnails in the page panel should match the number printed in the center of the page. The search index is built progressively and should find the reference code printed on every page.

8

Reference code R-0008

Long documents are a good test for memory usage, lazy loading and cancellation of stale work. Long documents are a good test for memory usage, lazy loading and cancellation of stale work. The search index is built progressively and should find the reference code printed on every page.

9

Reference code R-0009

Rendering must remain responsive while the user jumps between distant pages of the document. Rendering must remain responsive while the user jumps between distant pages of the document. Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance.

10

Reference code R-0010

Long documents are a good test for memory usage, lazy loading and cancellation of stale work. Thumbnails in the page panel should match the number printed in the center of the page. The search index is built progressively and should find the reference code printed on every page.

11

Reference code R-0011

Rendering must remain responsive while the user jumps between distant pages of the document. Rendering must remain responsive while the user jumps between distant pages of the document. The search index is built progressively and should find the reference code printed on every page.

12

Reference code R-0012

Rendering must remain responsive while the user jumps between distant pages of the document. Thumbnails in the page panel should match the number printed in the center of the page. Long documents are a good test for memory usage, lazy loading and cancellation of stale work.

13

Reference code R-0013

Rendering must remain responsive while the user jumps between distant pages of the document. Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance. Thumbnails in the page panel should match the number printed in the center of the page.

14

Reference code R-0014

Zooming in and out should keep the current page in view without visible jumps. Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance. Bookmarks for each chapter point to the first page of that chapter.

15

Reference code R-0015

Long documents are a good test for memory usage, lazy loading and cancellation of stale work. The search index is built progressively and should find the reference code printed on every page. Rendering must remain responsive while the user jumps between distant pages of the document.

16

Reference code R-0016

Rendering must remain responsive while the user jumps between distant pages of the document. Selecting text on this page should produce the same characters that are printed here. Selecting text on this page should produce the same characters that are printed here.

17

Reference code R-0017

Bookmarks for each chapter point to the first page of that chapter. Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance. The search index is built progressively and should find the reference code printed on every page.

18

Reference code R-0018

Bookmarks for each chapter point to the first page of that chapter. Bookmarks for each chapter point to the first page of that chapter. Bookmarks for each chapter point to the first page of that chapter.

19

Reference code R-0019

Selecting text on this page should produce the same characters that are printed here. Long documents are a good test for memory usage, lazy loading and cancellation of stale work. Zooming in and out should keep the current page in view without visible jumps.

20

Reference code R-0020

Zooming in and out should keep the current page in view without visible jumps. Bookmarks for each chapter point to the first page of that chapter. Zooming in and out should keep the current page in view without visible jumps.

21

Reference code R-0021

Thumbnails in the page panel should match the number printed in the center of the page. Bookmarks for each chapter point to the first page of that chapter. Zooming in and out should keep the current page in view without visible jumps.

22

Reference code R-0022

Selecting text on this page should produce the same characters that are printed here. Selecting text on this page should produce the same characters that are printed here. Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance.

23

Reference code R-0023

The search index is built progressively and should find the reference code printed on every page. Long documents are a good test for memory usage, lazy loading and cancellation of stale work. Selecting text on this page should produce the same characters that are printed here.

24

Reference code R-0024

Bookmarks for each chapter point to the first page of that chapter. Zooming in and out should keep the current page in view without visible jumps. The search index is built progressively and should find the reference code printed on every page.

25

Reference code R-0025

Zooming in and out should keep the current page in view without visible jumps. Rendering must remain responsive while the user jumps between distant pages of the document. Thumbnails in the page panel should match the number printed in the center of the page.

Chapter 2

Opening Documents

26

Reference code R-0026

Selecting text on this page should produce the same characters that are printed here. Long documents are a good test for memory usage, lazy loading and cancellation of stale work. Thumbnails in the page panel should match the number printed in the center of the page.

27

Reference code R-0027

Rendering must remain responsive while the user jumps between distant pages of the document. Zooming in and out should keep the current page in view without visible jumps. Long documents are a good test for memory usage, lazy loading and cancellation of stale work.

28

Reference code R-0028

Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance. Bookmarks for each chapter point to the first page of that chapter. The search index is built progressively and should find the reference code printed on every page.

29

Reference code R-0029

Rendering must remain responsive while the user jumps between distant pages of the document. Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance. Selecting text on this page should produce the same characters that are printed here.

30

Reference code R-0030

Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance. Selecting text on this page should produce the same characters that are printed here. The search index is built progressively and should find the reference code printed on every page.

31

Reference code R-0031

Thumbnails in the page panel should match the number printed in the center of the page. Bookmarks for each chapter point to the first page of that chapter. Bookmarks for each chapter point to the first page of that chapter.

32

Reference code R-0032

Rendering must remain responsive while the user jumps between distant pages of the document. Zooming in and out should keep the current page in view without visible jumps. Zooming in and out should keep the current page in view without visible jumps.

33

Reference code R-0033

Long documents are a good test for memory usage, lazy loading and cancellation of stale work. Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance. Zooming in and out should keep the current page in view without visible jumps.

34

Reference code R-0034

Thumbnails in the page panel should match the number printed in the center of the page. Long documents are a good test for memory usage, lazy loading and cancellation of stale work. Selecting text on this page should produce the same characters that are printed here.

35

Reference code R-0035

Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance. Rendering must remain responsive while the user jumps between distant pages of the document. Bookmarks for each chapter point to the first page of that chapter.

36

Reference code R-0036

Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance. Bookmarks for each chapter point to the first page of that chapter. Thumbnails in the page panel should match the number printed in the center of the page.

37

Reference code R-0037

Selecting text on this page should produce the same characters that are printed here. Selecting text on this page should produce the same characters that are printed here. Selecting text on this page should produce the same characters that are printed here.

38

Reference code R-0038

Rendering must remain responsive while the user jumps between distant pages of the document. Thumbnails in the page panel should match the number printed in the center of the page. Long documents are a good test for memory usage, lazy loading and cancellation of stale work.

39

Reference code R-0039

Selecting text on this page should produce the same characters that are printed here. Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance. Rendering must remain responsive while the user jumps between distant pages of the document.

40

Reference code R-0040

Thumbnails in the page panel should match the number printed in the center of the page. Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance. The search index is built progressively and should find the reference code printed on every page.

41

Reference code R-0041

Rendering must remain responsive while the user jumps between distant pages of the document. Long documents are a good test for memory usage, lazy loading and cancellation of stale work. Zooming in and out should keep the current page in view without visible jumps.

42

Reference code R-0042

Rendering must remain responsive while the user jumps between distant pages of the document. Rendering must remain responsive while the user jumps between distant pages of the document. Long documents are a good test for memory usage, lazy loading and cancellation of stale work.

43

Reference code R-0043

Long documents are a good test for memory usage, lazy loading and cancellation of stale work. Selecting text on this page should produce the same characters that are printed here. Bookmarks for each chapter point to the first page of that chapter.

44

Reference code R-0044

Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance. Rendering must remain responsive while the user jumps between distant pages of the document. Bookmarks for each chapter point to the first page of that chapter.

45

Reference code R-0045

Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance. Bookmarks for each chapter point to the first page of that chapter. Bookmarks for each chapter point to the first page of that chapter.

46

Reference code R-0046

Thumbnails in the page panel should match the number printed in the center of the page. Bookmarks for each chapter point to the first page of that chapter. Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance.

47

Reference code R-0047

The search index is built progressively and should find the reference code printed on every page. Selecting text on this page should produce the same characters that are printed here. Long documents are a good test for memory usage, lazy loading and cancellation of stale work.

48

Reference code R-0048

Selecting text on this page should produce the same characters that are printed here. Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance. Long documents are a good test for memory usage, lazy loading and cancellation of stale work.

49

Reference code R-0049

Bookmarks for each chapter point to the first page of that chapter. Selecting text on this page should produce the same characters that are printed here. Rendering must remain responsive while the user jumps between distant pages of the document.

50

Reference code R-0050

Selecting text on this page should produce the same characters that are printed here. Bookmarks for each chapter point to the first page of that chapter. Selecting text on this page should produce the same characters that are printed here.

Chapter 3

Navigating Pages

51

Reference code R-0051

Rendering must remain responsive while the user jumps between distant pages of the document. Zooming in and out should keep the current page in view without visible jumps. Bookmarks for each chapter point to the first page of that chapter.

52

Reference code R-0052

Thumbnails in the page panel should match the number printed in the center of the page. Bookmarks for each chapter point to the first page of that chapter. Rendering must remain responsive while the user jumps between distant pages of the document.

53

Reference code R-0053

Selecting text on this page should produce the same characters that are printed here. The search index is built progressively and should find the reference code printed on every page. Rendering must remain responsive while the user jumps between distant pages of the document.

54

Reference code R-0054

Bookmarks for each chapter point to the first page of that chapter. Rendering must remain responsive while the user jumps between distant pages of the document. Zooming in and out should keep the current page in view without visible jumps.

55

Reference code R-0055

The search index is built progressively and should find the reference code printed on every page. Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance. Long documents are a good test for memory usage, lazy loading and cancellation of stale work.

56

Reference code R-0056

Selecting text on this page should produce the same characters that are printed here. Rendering must remain responsive while the user jumps between distant pages of the document. Zooming in and out should keep the current page in view without visible jumps.

57

Reference code R-0057

The search index is built progressively and should find the reference code printed on every page. Selecting text on this page should produce the same characters that are printed here. Thumbnails in the page panel should match the number printed in the center of the page.

58

Reference code R-0058

Long documents are a good test for memory usage, lazy loading and cancellation of stale work. Zooming in and out should keep the current page in view without visible jumps. Zooming in and out should keep the current page in view without visible jumps.

59

Reference code R-0059

Bookmarks for each chapter point to the first page of that chapter. Thumbnails in the page panel should match the number printed in the center of the page. Thumbnails in the page panel should match the number printed in the center of the page.

60

Reference code R-0060

Selecting text on this page should produce the same characters that are printed here. Long documents are a good test for memory usage, lazy loading and cancellation of stale work. Rendering must remain responsive while the user jumps between distant pages of the document.

61

Reference code R-0061

Selecting text on this page should produce the same characters that are printed here. Rendering must remain responsive while the user jumps between distant pages of the document. Bookmarks for each chapter point to the first page of that chapter.

62

Reference code R-0062

The search index is built progressively and should find the reference code printed on every page. Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance. Bookmarks for each chapter point to the first page of that chapter.

63

Reference code R-0063

Selecting text on this page should produce the same characters that are printed here. Thumbnails in the page panel should match the number printed in the center of the page. Thumbnails in the page panel should match the number printed in the center of the page.

64

Reference code R-0064

Zooming in and out should keep the current page in view without visible jumps. Selecting text on this page should produce the same characters that are printed here. Rendering must remain responsive while the user jumps between distant pages of the document.

65

Reference code R-0065

Thumbnails in the page panel should match the number printed in the center of the page. Selecting text on this page should produce the same characters that are printed here. Long documents are a good test for memory usage, lazy loading and cancellation of stale work.

66

Reference code R-0066

The search index is built progressively and should find the reference code printed on every page. Selecting text on this page should produce the same characters that are printed here. Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance.

67

Reference code R-0067

Rendering must remain responsive while the user jumps between distant pages of the document. Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance. Thumbnails in the page panel should match the number printed in the center of the page.

68

Reference code R-0068

Rendering must remain responsive while the user jumps between distant pages of the document. The search index is built progressively and should find the reference code printed on every page. Bookmarks for each chapter point to the first page of that chapter.

69

Reference code R-0069

Selecting text on this page should produce the same characters that are printed here. Zooming in and out should keep the current page in view without visible jumps. Bookmarks for each chapter point to the first page of that chapter.

70

Reference code R-0070

Thumbnails in the page panel should match the number printed in the center of the page. Bookmarks for each chapter point to the first page of that chapter. Long documents are a good test for memory usage, lazy loading and cancellation of stale work.

71

Reference code R-0071

Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance. Rendering must remain responsive while the user jumps between distant pages of the document. Long documents are a good test for memory usage, lazy loading and cancellation of stale work.

72

Reference code R-0072

Zooming in and out should keep the current page in view without visible jumps. Long documents are a good test for memory usage, lazy loading and cancellation of stale work. Zooming in and out should keep the current page in view without visible jumps.

73

Reference code R-0073

Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance. Bookmarks for each chapter point to the first page of that chapter. Zooming in and out should keep the current page in view without visible jumps.

Reference code R-0075

Selecting text on this page should produce the same characters that are printed here. Bookmarks for each chapter point to the first page of that chapter. Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance.

Chapter 4

Searching Text

76

Reference code R-0076

Zooming in and out should keep the current page in view without visible jumps. The search index is built progressively and should find the reference code printed on every page. Long documents are a good test for memory usage, lazy loading and cancellation of stale work.

77

Reference code R-0077

Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance. Selecting text on this page should produce the same characters that are printed here. Selecting text on this page should produce the same characters that are printed here.

78

Reference code R-0078

Rendering must remain responsive while the user jumps between distant pages of the document. Zooming in and out should keep the current page in view without visible jumps. Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance.

79

Reference code R-0079

Bookmarks for each chapter point to the first page of that chapter. Bookmarks for each chapter point to the first page of that chapter. Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance.

80

Reference code R-0080

Bookmarks for each chapter point to the first page of that chapter. Rendering must remain responsive while the user jumps between distant pages of the document. The search index is built progressively and should find the reference code printed on every page.

81

Reference code R-0081

Bookmarks for each chapter point to the first page of that chapter. Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance. Long documents are a good test for memory usage, lazy loading and cancellation of stale work.

82

Reference code R-0082

Zooming in and out should keep the current page in view without visible jumps. Zooming in and out should keep the current page in view without visible jumps. Selecting text on this page should produce the same characters that are printed here.

83

Reference code R-0083

Selecting text on this page should produce the same characters that are printed here. Bookmarks for each chapter point to the first page of that chapter. Selecting text on this page should produce the same characters that are printed here.

84

Reference code R-0084

Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance. The search index is built progressively and should find the reference code printed on every page. Zooming in and out should keep the current page in view without visible jumps.

85

Reference code R-0085

Zooming in and out should keep the current page in view without visible jumps. Long documents are a good test for memory usage, lazy loading and cancellation of stale work. Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance.

86

Reference code R-0086

Thumbnails in the page panel should match the number printed in the center of the page. Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance. Thumbnails in the page panel should match the number printed in the center of the page.

87

Reference code R-0087

Rendering must remain responsive while the user jumps between distant pages of the document. Rendering must remain responsive while the user jumps between distant pages of the document. The search index is built progressively and should find the reference code printed on every page.

88

Reference code R-0088

Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance. Zooming in and out should keep the current page in view without visible jumps. Rendering must remain responsive while the user jumps between distant pages of the document.

89

Reference code R-0089

The search index is built progressively and should find the reference code printed on every page. Thumbnails in the page panel should match the number printed in the center of the page. Rendering must remain responsive while the user jumps between distant pages of the document.

90

Reference code R-0090

Thumbnails in the page panel should match the number printed in the center of the page. Zooming in and out should keep the current page in view without visible jumps. Zooming in and out should keep the current page in view without visible jumps.

91

Reference code R-0091

The search index is built progressively and should find the reference code printed on every page. The search index is built progressively and should find the reference code printed on every page. Thumbnails in the page panel should match the number printed in the center of the page.

92

Reference code R-0092

Long documents are a good test for memory usage, lazy loading and cancellation of stale work. The search index is built progressively and should find the reference code printed on every page. Selecting text on this page should produce the same characters that are printed here.

93

Reference code R-0093

Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance. Bookmarks for each chapter point to the first page of that chapter. The search index is built progressively and should find the reference code printed on every page.

94

Reference code R-0094

Bookmarks for each chapter point to the first page of that chapter. Zooming in and out should keep the current page in view without visible jumps. Bookmarks for each chapter point to the first page of that chapter.

95

Reference code R-0095

Selecting text on this page should produce the same characters that are printed here. Selecting text on this page should produce the same characters that are printed here. Selecting text on this page should produce the same characters that are printed here.

96

Reference code R-0096

Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance. The search index is built progressively and should find the reference code printed on every page. Bookmarks for each chapter point to the first page of that chapter.

97

Reference code R-0097

Bookmarks for each chapter point to the first page of that chapter. Long documents are a good test for memory usage, lazy loading and cancellation of stale work. Selecting text on this page should produce the same characters that are printed here.

98

Reference code R-0098

Bookmarks for each chapter point to the first page of that chapter. Selecting text on this page should produce the same characters that are printed here. Zooming in and out should keep the current page in view without visible jumps.

99

Reference code R-0099

Zooming in and out should keep the current page in view without visible jumps. The search index is built progressively and should find the reference code printed on every page. Thumbnails in the page panel should match the number printed in the center of the page.

100

Reference code R-0100

Thumbnails in the page panel should match the number printed in the center of the page. Long documents are a good test for memory usage, lazy loading and cancellation of stale work. Selecting text on this page should produce the same characters that are printed here.

Chapter 5

Comments and Markup

101

Reference code R-0101

The search index is built progressively and should find the reference code printed on every page. Bookmarks for each chapter point to the first page of that chapter. The search index is built progressively and should find the reference code printed on every page.

102

Reference code R-0102

Rendering must remain responsive while the user jumps between distant pages of the document. Selecting text on this page should produce the same characters that are printed here. Long documents are a good test for memory usage, lazy loading and cancellation of stale work.

103

Reference code R-0103

Long documents are a good test for memory usage, lazy loading and cancellation of stale work. Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance. Zooming in and out should keep the current page in view without visible jumps.

Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance. Rendering must remain responsive while the user jumps between distant pages of the document. Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance.

243

Reference code R-0243

Zooming in and out should keep the current page in view without visible jumps. Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance. Bookmarks for each chapter point to the first page of that chapter.

244

Reference code R-0244

Zooming in and out should keep the current page in view without visible jumps. Long documents are a good test for memory usage, lazy loading and cancellation of stale work. Selecting text on this page should produce the same characters that are printed here.

245

Reference code R-0245

Bookmarks for each chapter point to the first page of that chapter. Zooming in and out should keep the current page in view without visible jumps. Bookmarks for each chapter point to the first page of that chapter.

246

Reference code R-0246

Thumbnails in the page panel should match the number printed in the center of the page. The search index is built progressively and should find the reference code printed on every page. Zooming in and out should keep the current page in view without visible jumps.

247

Reference code R-0247

Bookmarks for each chapter point to the first page of that chapter. The search index is built progressively and should find the reference code printed on every page. Thumbnails in the page panel should match the number printed in the center of the page.

248

Reference code R-0248

Long documents are a good test for memory usage, lazy loading and cancellation of stale work. Thumbnails in the page panel should match the number printed in the center of the page. Zooming in and out should keep the current page in view without visible jumps.

249

Reference code R-0249

Long documents are a good test for memory usage, lazy loading and cancellation of stale work. Rendering must remain responsive while the user jumps between distant pages of the document. Thumbnails in the page panel should match the number printed in the center of the page.

250

Reference code R-0250

The search index is built progressively and should find the reference code printed on every page. Thumbnails in the page panel should match the number printed in the center of the page. Selecting text on this page should produce the same characters that are printed here.

Chapter 11

Optimizing Files

251

Reference code R-0251

Thumbnails in the page panel should match the number printed in the center of the page. The search index is built progressively and should find the reference code printed on every page. Selecting text on this page should produce the same characters that are printed here.

252

Reference code R-0252

Zooming in and out should keep the current page in view without visible jumps. Zooming in and out should keep the current page in view without visible jumps. Thumbnails in the page panel should match the number printed in the center of the page.

253

Reference code R-0253

Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance. Zooming in and out should keep the current page in view without visible jumps. The search index is built progressively and should find the reference code printed on every page.

254

Reference code R-0254

Zooming in and out should keep the current page in view without visible jumps. The search index is built progressively and should find the reference code printed on every page. Thumbnails in the page panel should match the number printed in the center of the page.

255

Reference code R-0255

Selecting text on this page should produce the same characters that are printed here. The search index is built progressively and should find the reference code printed on every page. Selecting text on this page should produce the same characters that are printed here.

256

Reference code R-0256

Long documents are a good test for memory usage, lazy loading and cancellation of stale work. The search index is built progressively and should find the reference code printed on every page. Thumbnails in the page panel should match the number printed in the center of the page.

257

Reference code R-0257

Long documents are a good test for memory usage, lazy loading and cancellation of stale work. Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance. Long documents are a good test for memory usage, lazy loading and cancellation of stale work.

258

Reference code R-0258

Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance. The search index is built progressively and should find the reference code printed on every page. Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance.

259

Reference code R-0259

Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance. Bookmarks for each chapter point to the first page of that chapter. Each page of this manual is numbered in large type so that scrolling and navigation can be verified at a glance.

260

Reference code R-0260

Rendering must remain responsive while the user jumps between distant pages of the document.
Rendering must remain responsive while the user jumps between distant pages of the document.
Bookmarks for each chapter point to the first page of that chapter.

261

Reference code R-0261

Long documents are a good test for memory usage, lazy loading and cancellation of stale work. Zooming in and out should keep the current page in view without visible jumps. Selecting text on this page should produce the same characters that are printed here.
